

## Diagnosis & staging

For men diagnosed in England and Wales April 2020 - March 2021:

men were diagnosed with prostate cancer 32,426 in England and Wales between 1st April 2020 and 31st March 2021

decrease compared with 45,885 men in 2019-2020\*

\*this may be explained by the reporting period being pre-COVID-19 in last year's report

of men were 70 years or older

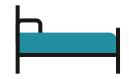

of men presented with metastatic disease

### **Treatment outcomes**

For men undergoing surgery in England and Wales between April 2020 - March 2021:

of men were readmitted within 12% or men were read...
3 months following surgery

Decreased compared with 13% in 2019-2020

For men undergoing radical treatment between October 2018 and September 2019:

experienced at least one **genitourinary** complication requiring a procedural/surgical intervention within two years after radical prostatectomy

experienced at least one gastrointestinal complication requiring a procedural/surgical intervention within two years after radical radiotherapy

Stable compared with 7% in last year's report

Decrease compared with 11% in last year's report

#### Treatment allocation

For men diagnosed in Wales April 2020 - March 2021:

Low-risk, localised disease

High-risk/locally advanced disease

of men had radical treatments and were potentially 'over-treated' -10% in 2019-2020

of men did not have radical treatments and were **potentially** 'under-treated' - 40 % in 2019-2020

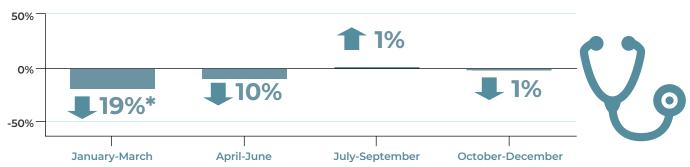

## Impact on **Diagnosis**

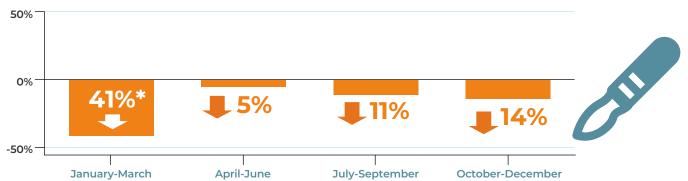

Number of patients newly diagnosed with prostate cancer in 2021 (compared to same period in 2019)

<sup>\*</sup> There was a 19% reduction in the number of men diagnosed between January-March 2021 compared with same period in 2019

# Impact on Radical treatment received

Number of patients undergoing radical prostatectomy in 2021 (compared to same period in 2019)

<sup>\*</sup> There was a 41% reduction in the number of men undergoing prostatectomy between January-March 2021 compared with same period in 2019

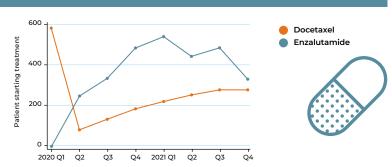

Number of patients undergoing radical radiotherapy in 2021 (compared to same period in 2019)

<sup>\*</sup> There was a 31% reduction in the number of men undergoing radiotherapy between January-March 2021 compared with same period in 2019

### Impact on systemic therapy

There has been a dramatic shift in utilisation rates of **Docetaxel** and **Enzalutamide** during 2020 and 2021.

## Impact on Diagnosis

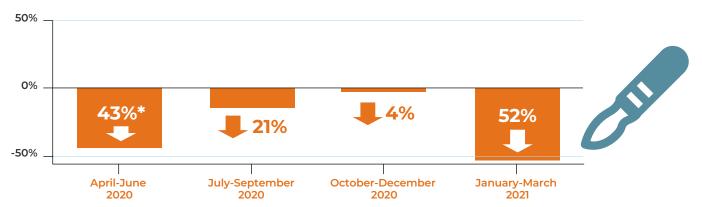

Number of patients newly diagnosed with prostate cancer in 2020 or 2021 (compared to same period in 2019)

<sup>\*</sup> There was a 52% reduction in the number of men diagnosed between April - June 2020 compared with same period in 2019

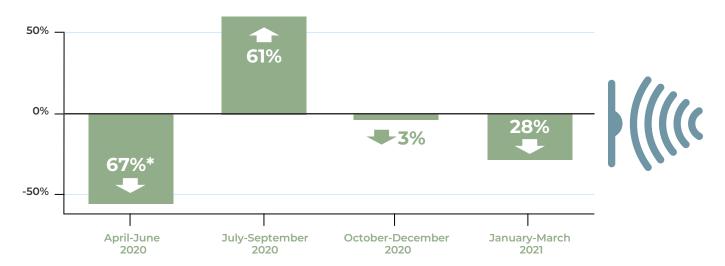

## Impact on Radical treatment received

Number of patients undergoing radical prostatectomy in 2020 or 2021 (compared to same period in 2019)

<sup>\*</sup> There was a 43% reduction in the number of men undergoing prostatectomy between April - June 2020 compared with same period in 2019

### Number of patients undergoing radical radiotherapy in 2020 or 2021 (compared to same period in 2019)

<sup>\*</sup> There was a 67% reduction in the number of men undergoing radiotherapy between April - June 2020 compared with same period in 2019
